A Member of Cayuga Health System

Welcome to the Department of Imaging Services at Cayuga Medical Center

We are here to assist in the diagnosis of medical conditions and orthopedic injuries using various forms of radiography and imaging technology. We want to make you as comfortable as possible during your exam, while providing timely, thorough, and accurate diagnostic information to your doctor.

The information in this brochure will tell you about the imaging study for which you are scheduled. If you have additional questions, please feel free to call **(607) 274-4376** and ask for the diagnostic supervisor. This person will be able to help you.

About our Imaging Services

Cayuga Medical Center has a commitment to and reputation for staying abreast of changing technology and our imaging equipment is state-of-the-art.

Our range of services is comprehensive and we offer all imaging modalities found in major medical centers. Radiologists are on site at all three of our locations, which also distinguishes the level of service we provide.

Imaging Services is staffed by six board certified radiologists, many of whom are sub-specialists in areas such as neuroradiology, abdominal CT, and interventional procedures. Assisting them are experienced radiologic technologists and sonographers, many of whom have completed advanced training and are certified in specialty modalities.

PICC Line (Peripherally Inserted Central Venous Catheter)

What is the test?

A peripherally inserted central venous catheter (PICC line) addresses your needs for intravenous (IV) drug therapy. A PICC catheter is soft, flexible tubing consisting of either silicone or polyurethane. It is designed for the infusion of fluids including: blood products, medications, and IV nutrients. A PICC line may also be used for blood sampling. The PICC is placed into a vein in your arm and may facilitate venous access for weeks or months depending on your IV therapy needs.

How do I prepare?

There is no special preparation needed for the insertion of a PICC line. Plan to arrive at the Imaging Services Department 15 minutes before your scheduled appointment.

What can I expect during the procedure?

The PICC insertion is a sterile procedure. You will lie on an X-ray table with your arm extended away from your body. An ultrasound technologist will take an image of your arm to determine the size of your vein, to assure that the PICC line will fit within the vein. The radiologist will access the vein using a needle and then use a special type of X-ray called fluoroscopy to obtain an image of the arm as he passes the PICC line up the vein. Once the radiologist has the PICC in the proper location, the line will be secured and a clean dressing applied. Often a chest X-ray is then performed to document the PICC placement.

After the procedure?

You will receive verbal instructions and information on how to care for and use your PICC line. Typically, within 48 hours a written report about your PICC will
